

# Bilaga 1 Sökprotokoll

Sökningarna är kompletterande sökningar i databaserna Cinahl Complete, Psycinfo och PubMed utifrån de sökblock som har dokumenterats i en av Myndigheten för arbetsmiljökunskaps kunskapssammanställningar, Psykosocial arbetsmiljö – hälsa och välbefinnande i bilaga 7 (Kunskapssammanställning 2020:5).

Sökblocken och sökstegen har analyserats varje databas för sig.

Sedan har sökningar utförts i respektive databas och referenser avseende interventioner har laddats ner i referenshanteringsprogrammet EndNote och sedan sammanställts i en referenslista. Avgränsningar har gjorts till åren 2019 – 2022.

Vissa söksteg och sökstrategier har fått anpassas till de förhållanden som varje databasleverantör erbjuder. Resultaten bedöms dock inte menligt påverkat sökresultaten. Se nedanstående dokumentation för varje databas.

De artiklar som projektgruppen valt ut för vidare studier och som hämtats i ovan nämnda rapport har kontrollerats mot de sökningar som nu gjorts. Alla referenserna har återvunnits vilket också borgar för att den nuvarande sammanställningen utförts på ett korrekt sätt.

## Kommentar – DE (Descriptor vs. MH Subject Headings)

I sökdokumentationen anges att vissa sökningar gjorts i *DE-fälten (descriptor)*. En sådan motsvarighet finns inte i EBSCOhosts plattform. Närmast är *MH-fältet (MH Exact Subject Heading)*, varför detta fält, MH, ersatt DE vid sökningarna.

[På EBSCO:s dokumentation står följande](#): ”CINAHL Complete Subject Headings help users effectively search and retrieve information and follow the structure of the Medical Subject headings (MeSH) used by the National Library of Medicine.” Se även [CINAHL Guide: CINAHL Overview](#) på termen MH.
